Additional Information Related wikis Proof of Work – Wikipedia Proof of Work is an algorithm used to prevent double spending in electronic transactions. A hashcash puzzle, it was proposed by Adam Back in 1996. A hashcash puzzle is a cryptographic puzzle that produces a hashcash puzzle using the hashcash puzzle function. This is considered secure against modern hashing attacks. Bots – Wikipedia A bot is an artificial intelligence program designed to undertake some task automatically. They are often used for playing games. In computer security, a botnet is a network of computers infected with malware, and sometimes used for online attacks. A botnet can be a single computer, or a large group of computers. Nmap Script Nmap is a free and open source (license) network scanner. It is developed by the Nmap Project, a 501(c)(3) nonprofit organization. The developers give priority to security research, rather than scanning networks for signs of malicious activity. This is in contrast to many commercial network scanners, which require customers to pay a subscription or other fee to use the product. Cryptography – Wikipedia Cryptography is the study of techniques for secure communication. It deals with encryption, the conversion of information or data that is readable to humans but unreadable to computers. Cryptographic algorithms and protocols are the basis for digital signatures, public-key cryptography, secure email, secure web browsing, secure chat and secure online transactions.
